AGILE Conference, 14 – 17. June, 2022, Vilnius

BACKGROUND

Curriculums where we teach geoinformatics

- BSc Geography
- MSc Geography, specialisation in geoinformatics and cartography
- MSc Geoinformatics for Urbanised Society
- PhD Geography, specialisation in geoinformatics and cartography
- Micro-degree "Contemporary Geoinformatics"

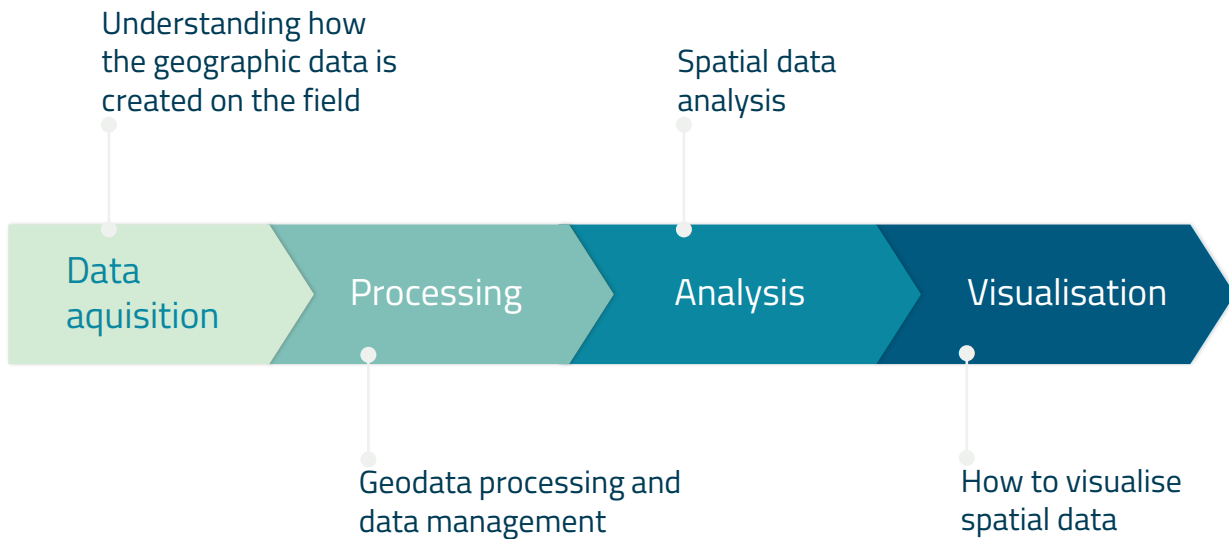

Courses

- Spatial Data Studio (15 ECTS)
- Spatial Analysis (6 ECTS)
- Geospatial Analysis with Python and R (6 ECTS)
- Spatial Data Infrastructure (6 ECTS)
- Spatial Databases (6 ECTS)
- 3D Modelling and Analysis (6ECTS)
- Web Mapping (2 ECTS)

Teaching methods instead of tools

GeoServer

ArcGIS

WHAT DATA IS USED?

Local data

Estonian Land Board

[Download »](#)

Scale 1:10000

[Download »](#)

1:10000, 1:5000, 1:2000

[Download »](#)

LIDAR collected elevation points

Cadastral Data

Address Data

Administrative and
Settlement Division

Estonian Soil Map

Geo3D

Geological Data

What enables good uptake?

- Very good metadata in Estonian and English

Estonian topographic database

core data layer names, field names, their descriptions and domain values with descriptions

Field names and descriptions not related to specific layer:

etak_id – unique object ID of Estonian topographic database

kood – grouping code (also included into in layer name), for example in case of layer E_101_kivi_p the code domain value is 101 and it's human readable value is boulders)

tyyp – type of the feature (values vary by layer, see below)

kmr_id – ID of national registry of cultural monuments

knr_id – ID of place names register

kkr_kood – ID of Estonian Nature Information System (environment registry objects)

nimetus – name of the object

mips_id – ID of land improvement register

ehr_gid – ID of building register

ads_oid – ID of address data system

ads_lahiaaddress – short address (from address data system), without municipality name, ie street name and building number or name of the cadastral parcel or address of traffic surface, administrative or territorial unit

- The data can be downloaded in multiple formats and in different bundles
- The focus should be on open standards

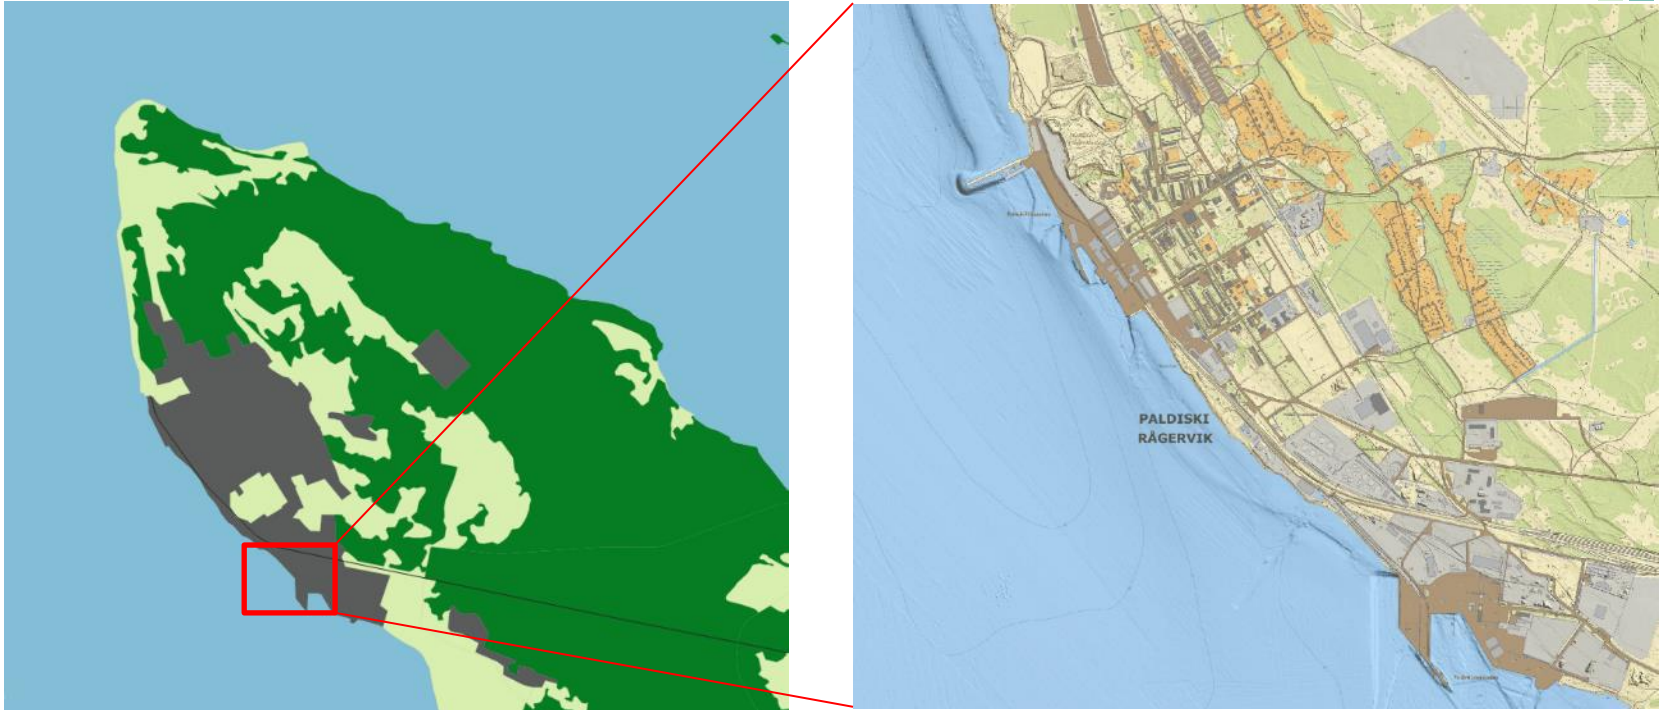

Full dataset of entire Estonia

- ESRI Shape format (SHP) (1.1G)
- ESRI geodatabase format (GDB) (844M)
- Mapinfo format (TAB) (790M)
- Geopackage format (GPKG) (1.3G)
- Bentley Microstation format (DGN) (923M)
- Autocad Drawing Interchange Format (DXF) (1.5G)

Thematic datasets for entire Estonia

Theme	Esri SHP	Mapinfo TAB	Microstation DGN	Autocad DXF
Buildings	 SHP (120M)	 TAB (96M)	 DGN (86M)	 DXF (112M)
Land use types	 SHP (590M)	 TAB (391M)	 DGN (487M)	 DXF (872M)
Relief	 SHP (11M)	 TAB (7.5M)	 DGN (8.5M)	 DXF (11M)
Utility facilities	 SHP (2.8M)	 TAB (1.8M)	 DGN (2.2M)	 DXF (2.7M)
Transportation	 SHP (154M)	 TAB (106M)	 DGN (111M)	 DXF (171M)
Waterbodies	 SHP (270M)	 TAB (171M)	 DGN (209M)	 DXF (338M)

- Different resolution/scale

Some considerations

- WFS vs complete data download
- The most up-to-date data vs versioning
- Raster data download is still inconvenient– one possible solution is SpatioTemporal Asset Catalog (STAC)
- For using the WMS as basemap, it is useful to have the possibility to render layers separately

EXAMPLES

TABLE 1. STUDENT POPULATION WITHIN VILLANDI COUNTY HIGH SCHOOL ZONING SERVICE AREAS

FIGURE 2. VII JANDI HIGH SCHOOL 20MIN SERVICE AREAS

SCHOOL NAME	SERVICE AREA POPULATION (15-19 OF AGE)
AASA GYMNAASIUM	316
CARL ROBERT JAKOBSONI NIMELINE GYMNAASIUM	1524
KARKKIS-NILIA GYMNAASIUM	402
MÖSÄKÜLI & KOSKIKOOLI	270
ERIKURU-JAANI GYMNAASIUM	1197
TARVASTU GYMNAASIUM	590
VILJANDI ERIKUTSEKOOLI KAUGÖPPEOSAKOND	1637
VILJANDI MAAGÜGNAASIUM	1644
VILJANDI PAALALINNA GYMNAASIUM	1511
VILJANDI TÄISKASVANUTE GYMNAASIUM	1636
VILJANDI VENE GYMNAASIUM	1528
VÕHMA GYMNAASIUM	283

TO OPTIMIZE THE SCHOOL NETWORK BY CLOSING AT LEAST ONE SCHOOL. AREA GÖRINÄSÄSILIN CAN BE IDENTIFIED FOR POTENTIAL CLOSURE. IT HAS THE 3RD LARGEST SERVICED STUDENT POPULATION WITH 375 STUDENTS WITHIN 20MIN SERVICE AREA. WHILE 2 SCHOOLS HAVE AN EVEN SMALLER SERVICED POPULATION, AREA GÖRINÄSÄSILIN HAS THE SMALLEST PROPORTION OF ITS SERVICE AREA THAT DOES NOT ALREADY COVERED BY THE SERVICE AREA OF ANOTHER SCHOOL.

FIGURE 3 SHOWS THERE CURRENTLY ARE 332 STUDENTS AGED 10-19, WHO ARE NOT WITHIN 5KM SERVICE AREAS OF ANY SCHOOLS. 180 OF THESE STUDENTS ARE 15-19 YEARS OLD AND 201 ARE IN THE 10-15 AGE RANGE.

THIS MEANS THAT MIDDLE SCHOOL ACCESSIBILITY IS A MORE IMMEDIATE ISSUE, CONSIDERING THAT YOUNGER STUDENTS MAY BE MORE DEPENDENT ON THEIR GUARDIANS IN REGARDS TO MOVING LONGER DISTANCES.

THE MOST DENSE CLUSTERS OF STUDENTS OUTSIDE THE 5KM SERVICE AREAS IS IN THE SOUTHERN PART OF THE MUNICIPALITY. THERE STUDENT POPULATION DENSITY REACHES 713 STUDENTS PER 1KM2 BETWEEN SERVICE AREAS.

AT THE SAME TIME THE MOST VAST AREAS WITHOUT SERVICE AND WITH EXISTING STUDENT POPULATION CAN BE FOUND IN THE CENTRAL AREA OF THE COUNTY, CLOSE TO THE LARGEST SCHOOL CLUSTER.

FIGURE 4 SHOWS THE SHORTEST ROUTE FOR A POTENTIAL INSPECTOR VISIT. THE OPTIMAL ROUTE COVERING ALL 33 SCHOOLS IS 535.4KM LONG.

SOFTWARE: QGIS 3.18.12

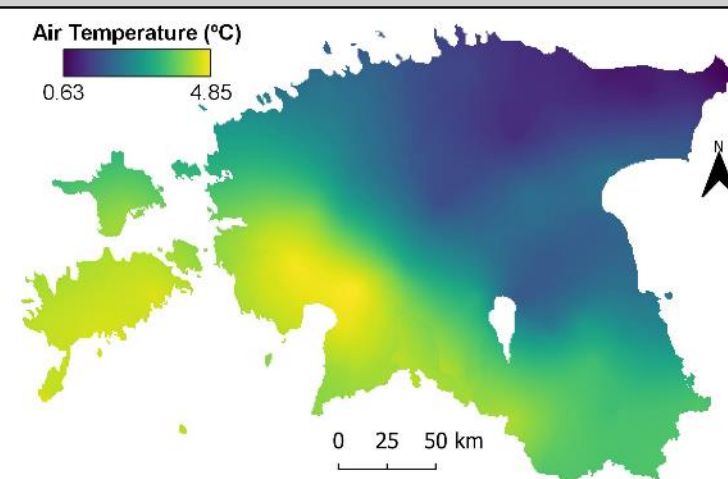

Thiessen polygons (Voronoi Diagram)

IDW Interpolation

B-Spline Interpolation

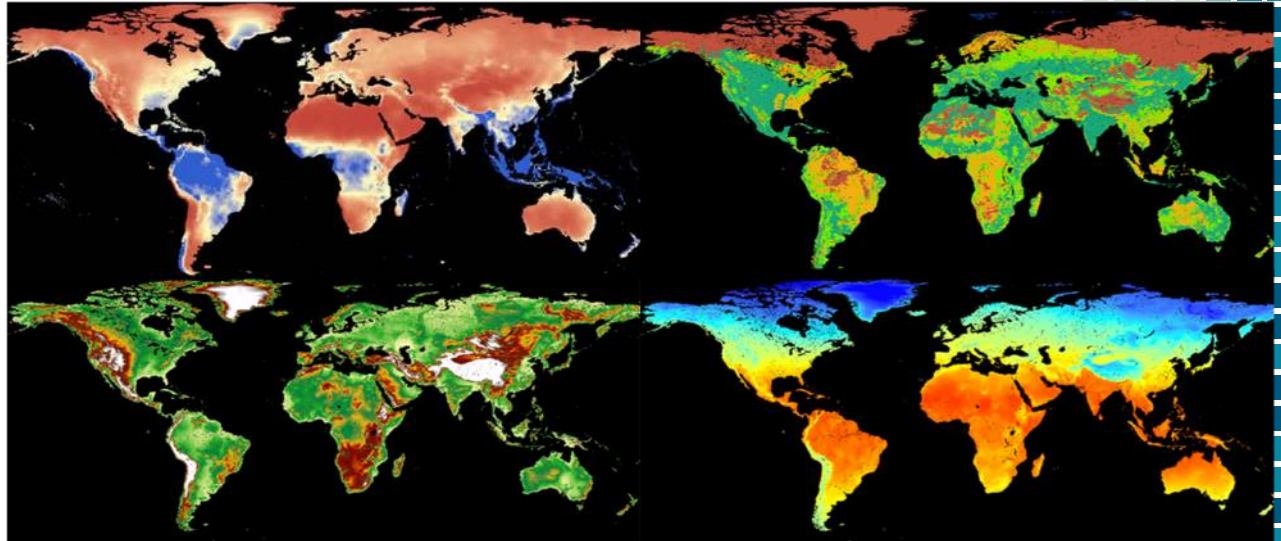

Kriging Interpolation

Global Data

- Mostly environmental data: elevation, soil, land cover

- Enables to work with very diverse data
- Gives skills to combine data from various sources and various quality
- Trains critical (spatial) thinking

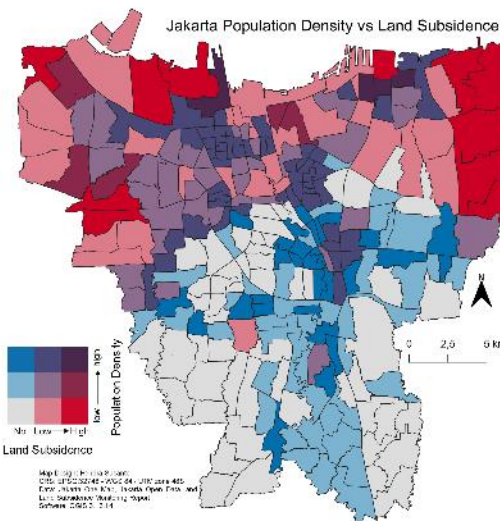

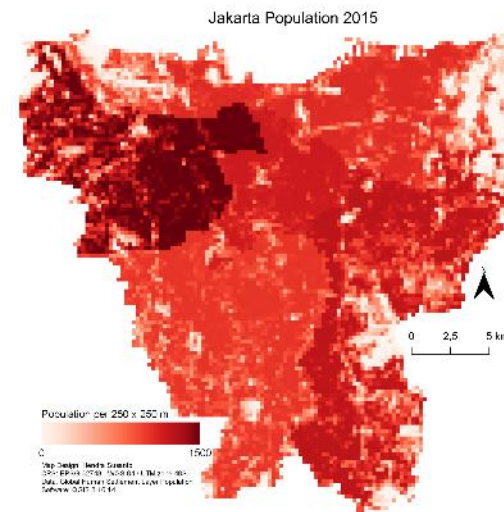

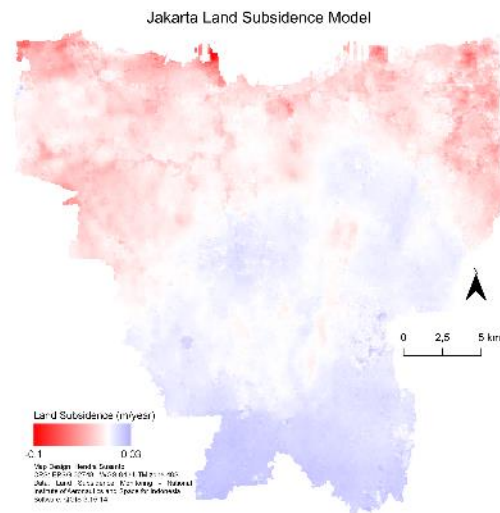

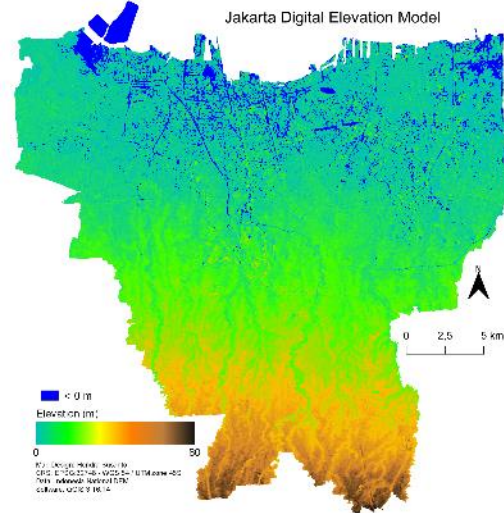

EXAMPLES

Average Temperature in Nevada (1970 - 2000)
January

Croplands in Nevada by erodibility

Fire susceptibility in Plumas and Tahoe National Forests

- Plumas/Tahoe National Forest Boundary
- California/Nevada border
- City

Susceptibility to fire

Less susceptible

Moderately susceptible

Highly susceptible

0 20 40 km

Chico

Yuba City

Reno

Thank you!
