Photogrammetry of small objects: Sharpness and depth of field

Trade-off between sharpness and quality of distortion pattern

○ If high *focus breathing* :

Focus modification

Principal Distance modification

○ If low *focus breathing* :

Focus modification

Principal Distance modification

○ In macro photogrammetry, we prefer to use auto-focus, but choose a lens that generates little *focus breathing*

SOTA : Use Duct-tape to lock the focusing ring \Rightarrow maintain the same settings

Photogrammetry of small objects: set-up

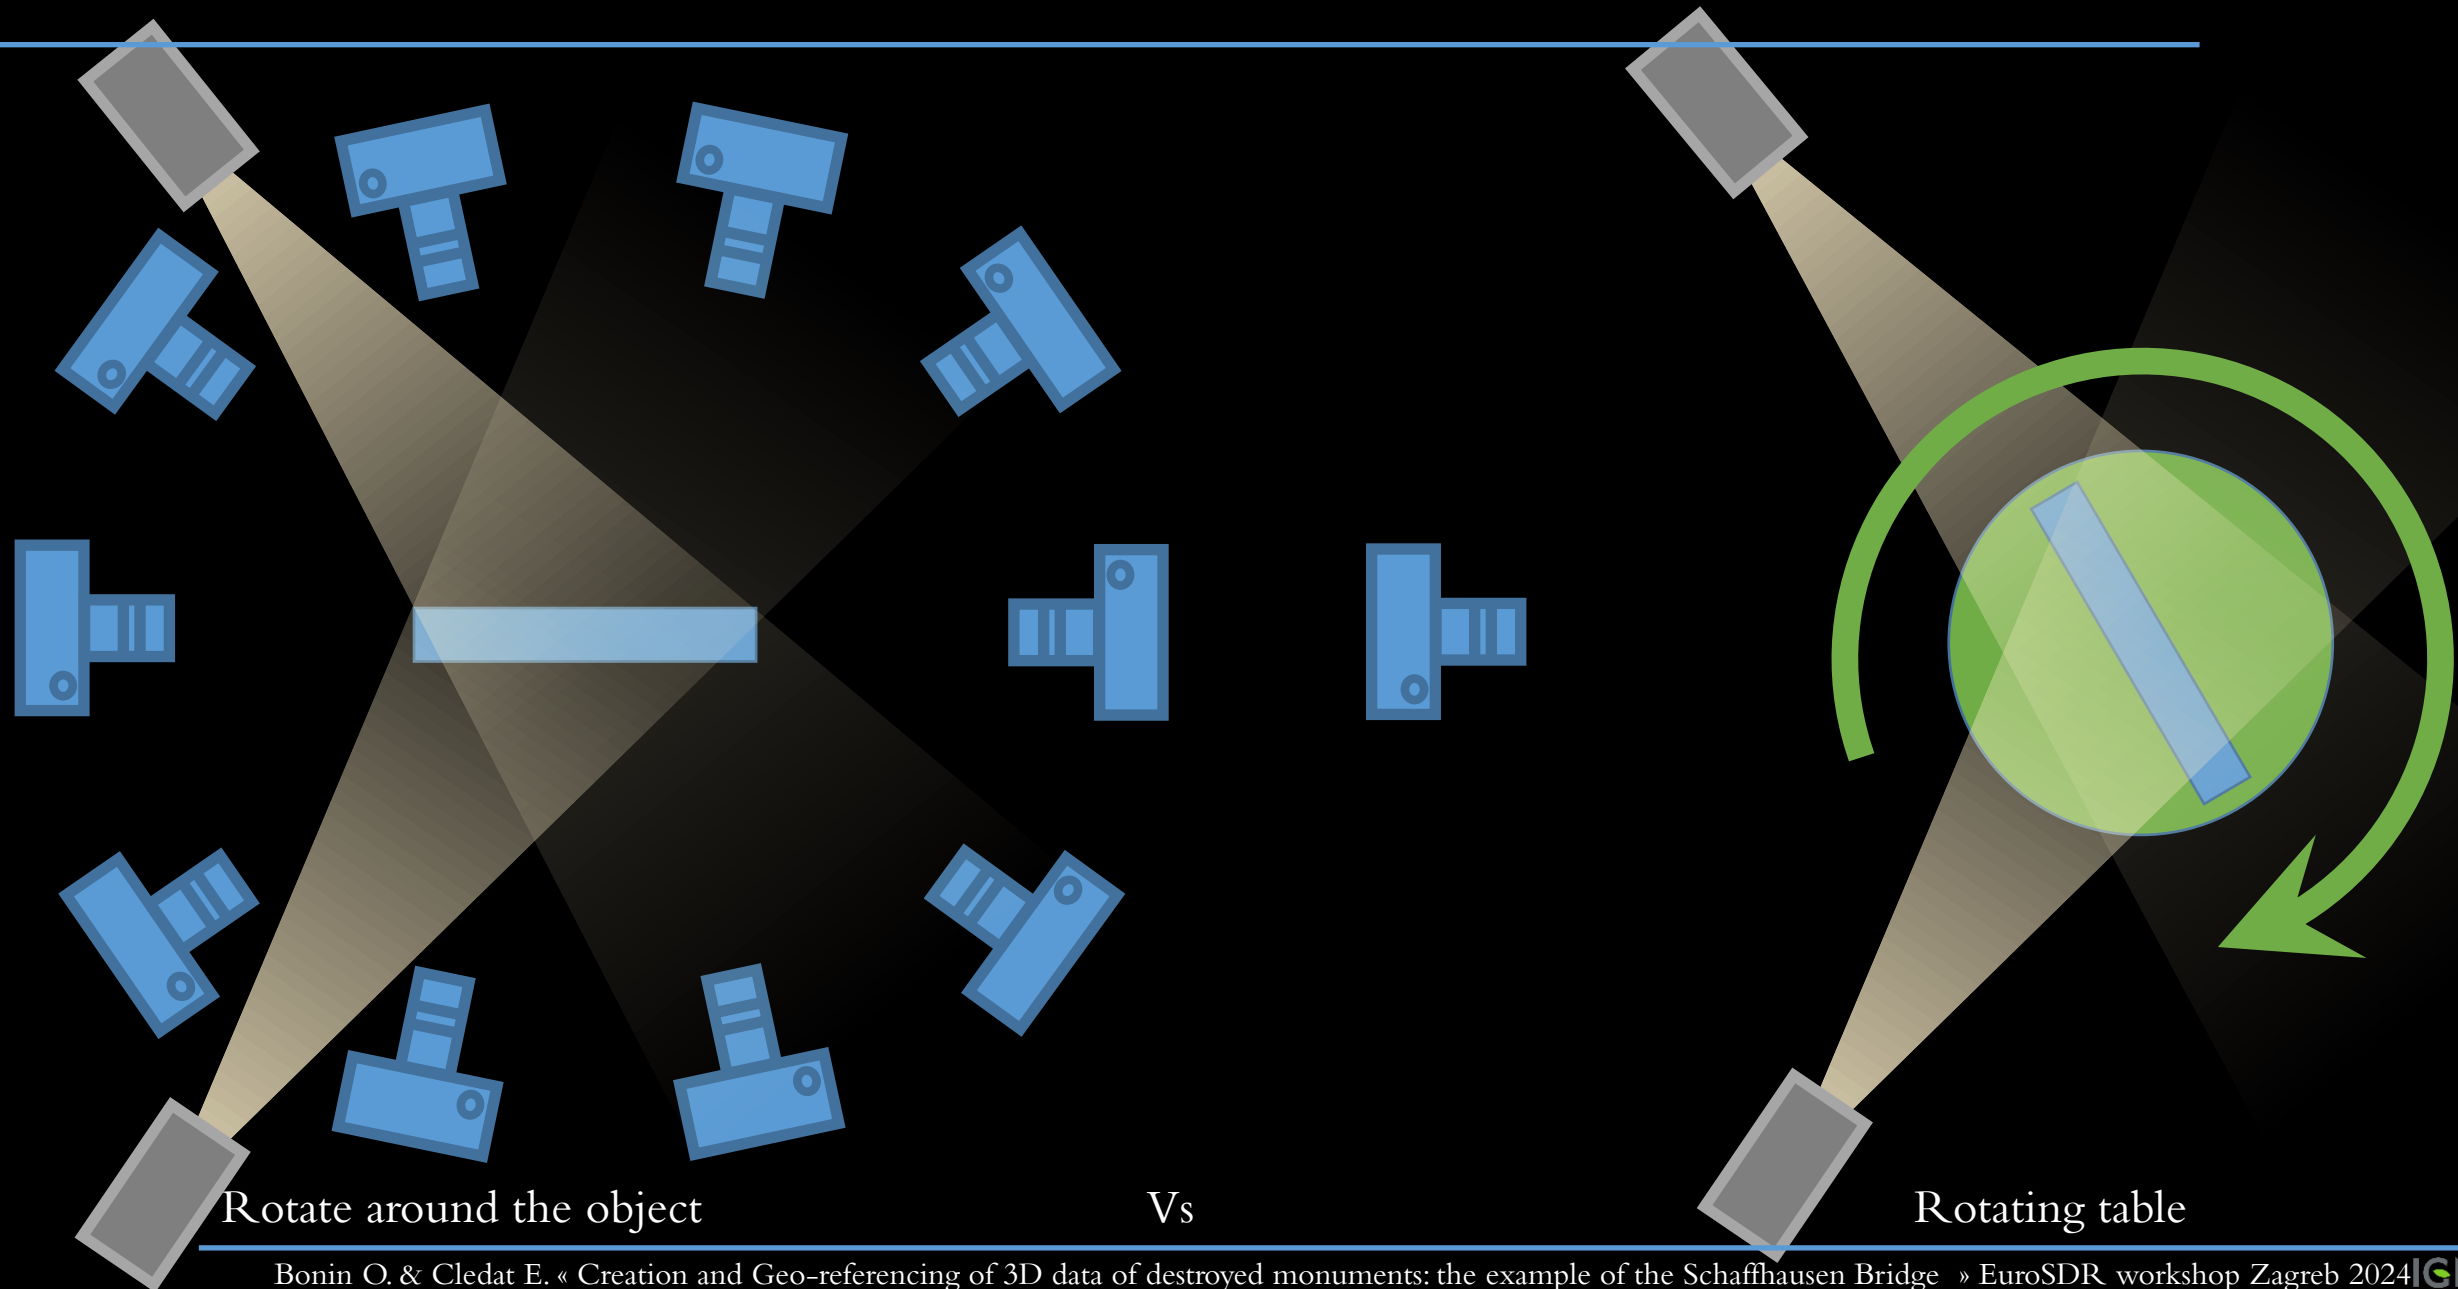

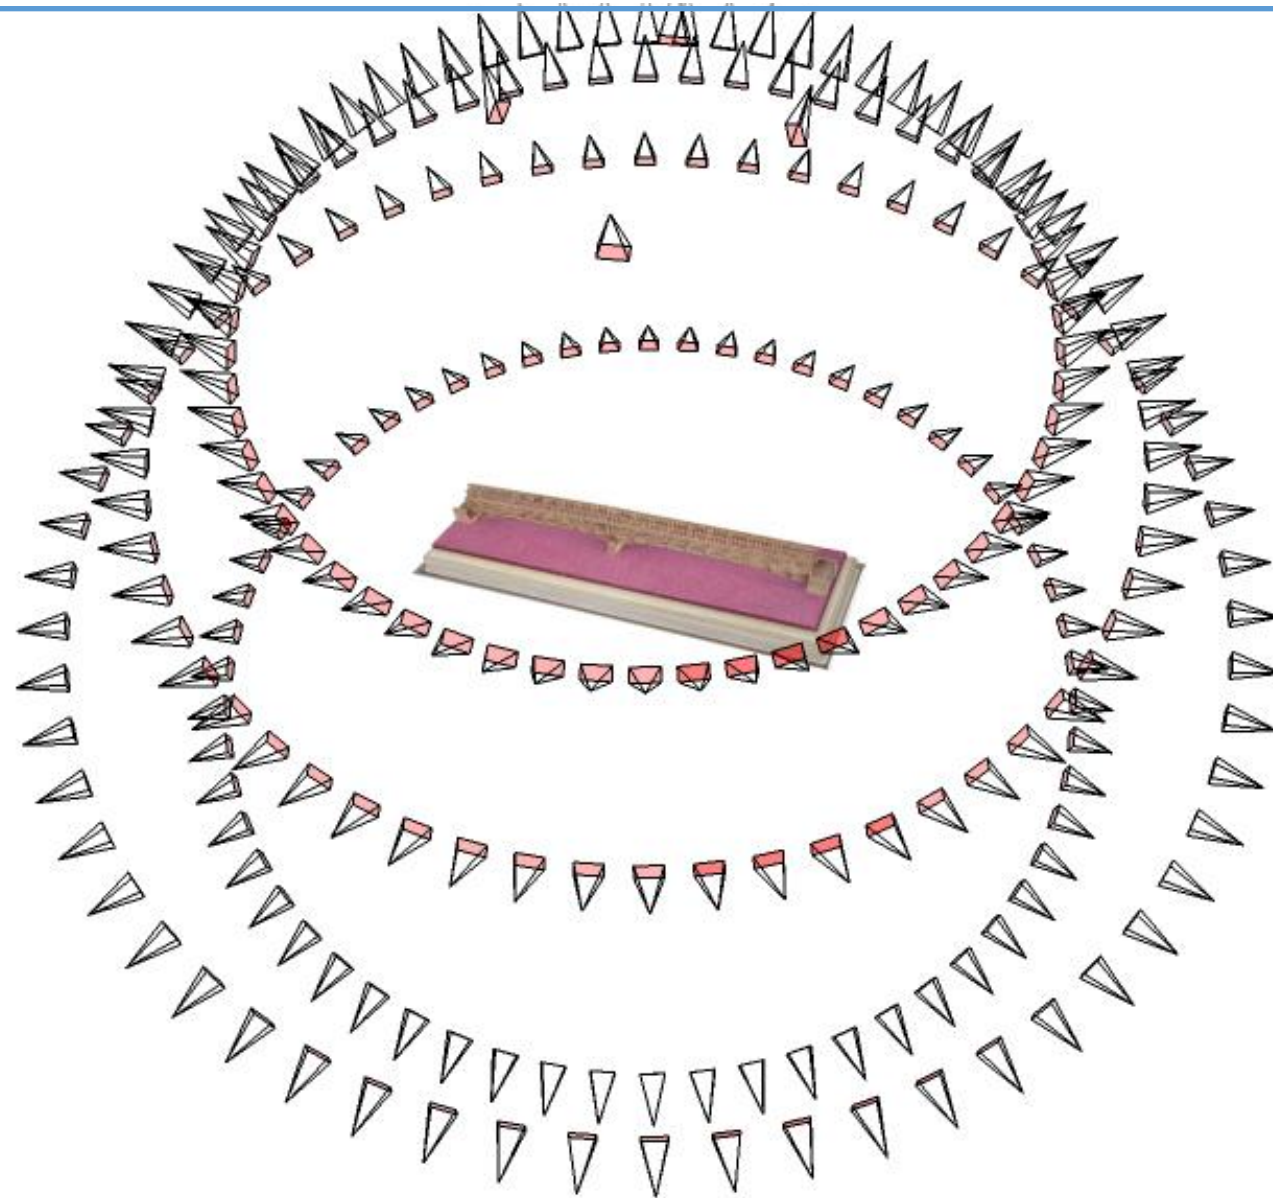

Photo shooting of the model from the Ecole des Ponts: External Orientation

Photogrammetry of small objects: Background color

Existing background

Blue background

White background

Black background : *in the void*

White background removal

Black background removal

3D model to be georeferenced

Georeferencing of old models of town: Easy!

3D model to be georeferenced

GCPs almost aligned => Bad determination of the verticality

Verticalization of the 3D model

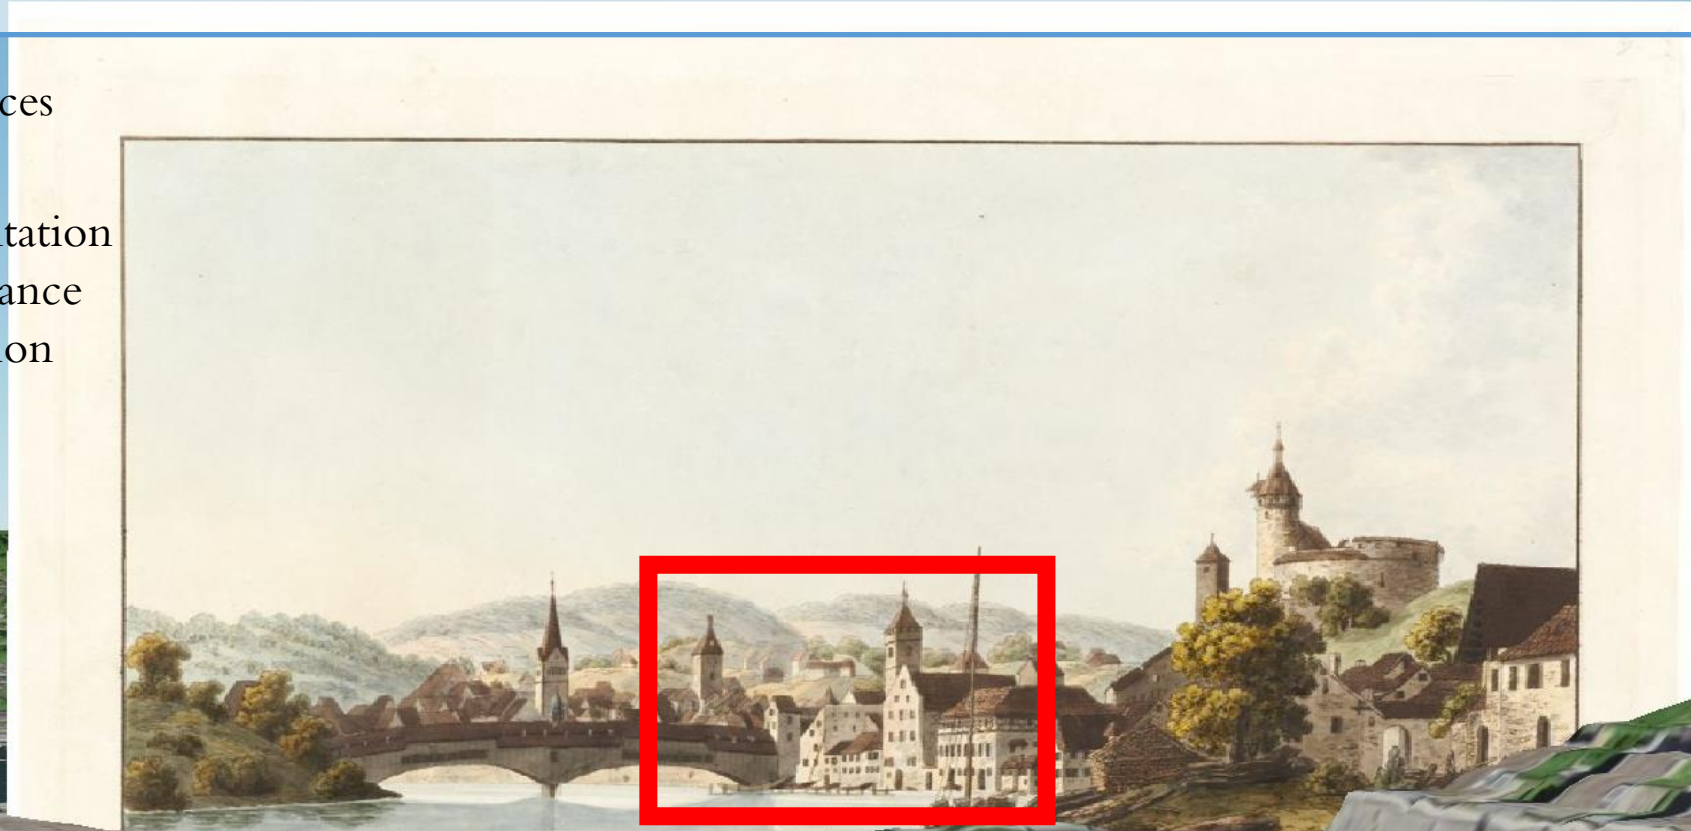

2D documents georeferencing

2D – 3D correspondances

⇒ Image

Absolute-Orientation
+ Principal Distance
Détermination

Same place

Set back from the Rhine river

Geo-referencing of 3D data over LIDAR HD

[10]

Geo-referencing of 3D data over LIDAR HD

[10]

Technical conclusions on photogrammetry

Conclusion

- The Schaffhausen Bridge: a manifesto of difficulties of small objects 3D reconstruction
- Cross sourcing from 2D maps, 2D perspective illustrations, 3D data
- Various methods: maps visualization, graph theory drawing, 2D map georeferencing, Photogrammetry

Techniques Perspectives, Outlooks

- Establish an experimental protocol for *Focus Breathing* quantification and correction
- Create a BIM from these 3D models, with the help of the 2D drawings for Structure simulation

Perspectives: entire city district 3D modellisation

Few models of the *Ecole des Ponts* collection

Photogrammetric 3D modelling of models is not trivial...

White background removal

Depth map

Photogrammetry of small complex models: mesh creation

Classic Workflow

Integrated Workflow

Point-Cloud

Mesh from Point-Cloud

The best Mesh from Depth-map!

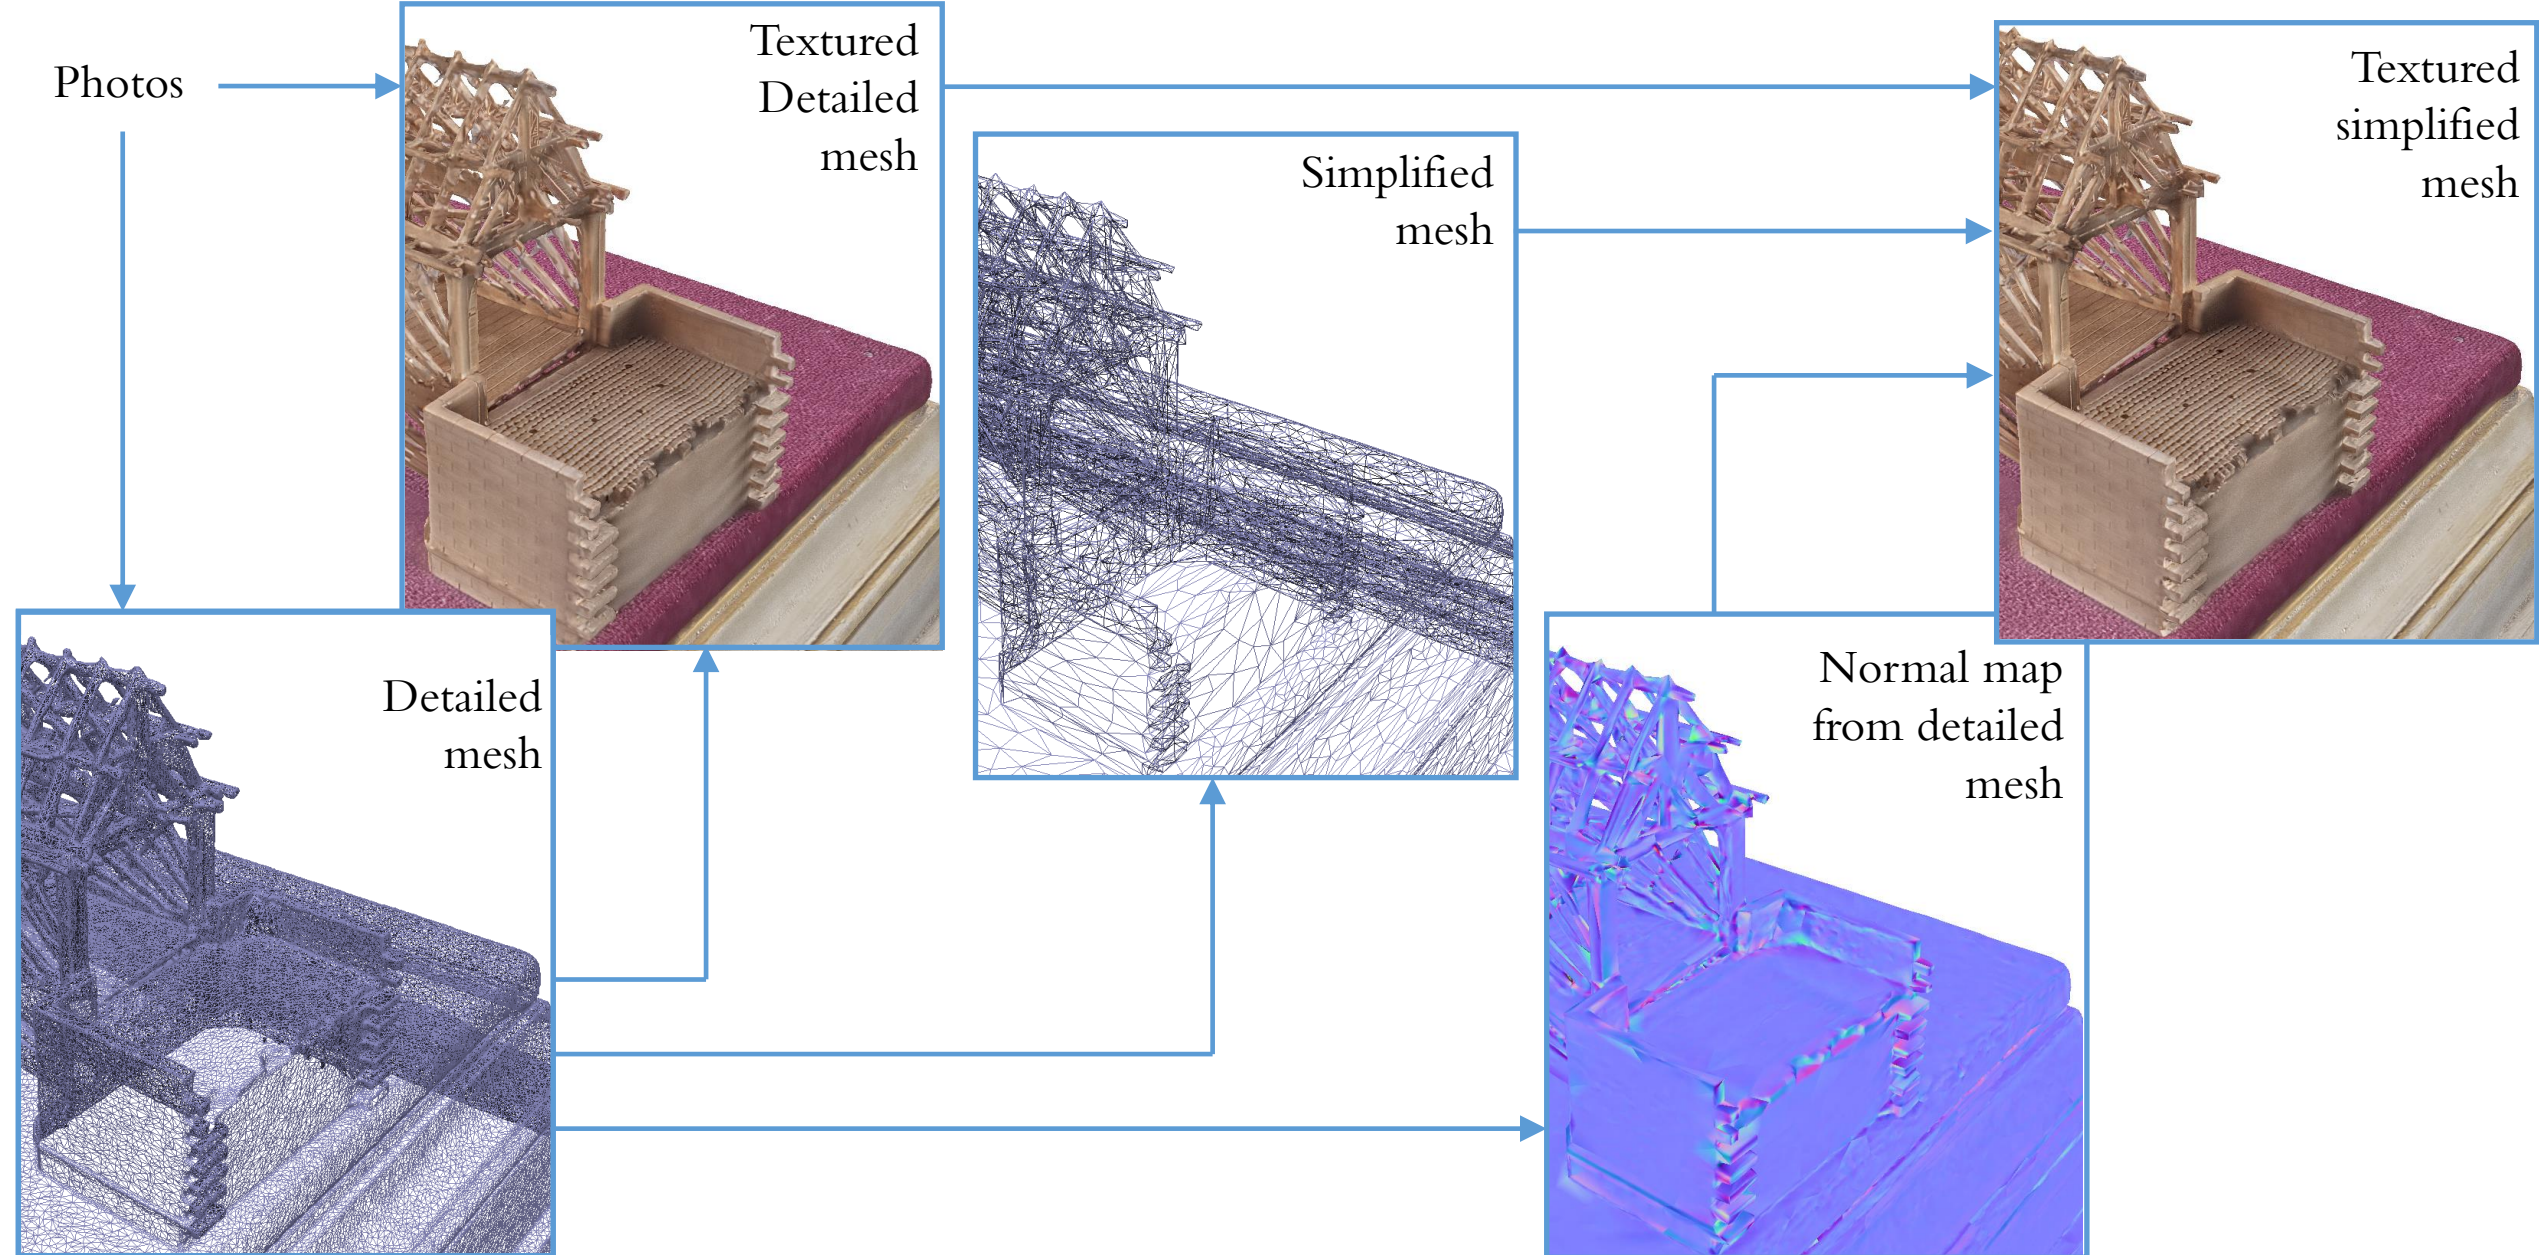

Mesh texturation: naive approach

Photos

Mesh texturation: advanced approach (using UV mapping)

Verticalization of the 3D model

Fit the plane of the base of the model
Planarity error of this base-plane: 1/1000

Model \perp to this plane

Alignement of the two models in the same frames

Legend:

Model of the
Ecole des Ponts

Model of the
Teufen museum

2.5D alignment:

Two different angles \Rightarrow Our choice was to align both segments separately

2D points on vertical beams

\Rightarrow 4 parameters of the 2D Helmert transformation: scale, translation XY, rotation Z

Points on the ridge beam \Rightarrow translation Z
